

**System and Method for Dynamic Meeting Agenda with
Event Firing Progress Indicators**

ABSTRACT

A system and method for dynamic meeting agenda with
5 event firing progress indicators is presented. A meeting
leader uses a computing device to dynamically manage an
agenda that corresponds to a meeting. The leader selects
agenda items as they are discussed and the computing device
adjusts subsequent agenda item timeslots corresponding to
10 the meeting's progression. The leader may also re-arrange
the order of agenda items and the computing device
automatically adjusts subsequent action items accordingly.
Participants are notified of agenda item timeslot changes
and subscribers are notified when they are allowed to join
15 a meeting at a particular entry point.
